

FLEXIBILITY FOR EVERY INSTALLATION

Perfectly adapted and individual!

Do you still have too much hose or a few compressors in stock? Never mind! Just compose the right sewage treatment plant for you. Also without hose or with a special compressor of your choice.

We have arranged a PUROO® modular system with which you can create both, the PUROO® M for partition wall installation, as also the PUROO® Z for fixing in empty tanks, all from 1-16 PE individually designed for our application. Or also both versions as PUROO® Complete with an aerated primary tank.

Furthermore, there is an even more comprehensive AQUAMAX® modular system available from 1-75 PE, with the possibility

of arranging the CLASSIC-, as well as the PRO G version with pressure aeration.

In the PUROO® and the AQUAMAX® modular system, more than 1,000 different combinations of all components are available to you.

Simply choose the right core system package for your application and add the necessary control, the corresponding aeration components and the additional accessories. All core packages are marked with a serial number as usual.
